2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest the recited the multiwell plate. The broadest independent claim identifies an upper plate made from a plasma treated polymeric material and a lower plate made from pyrolyzed glass that is joined to the upper plate with adhesive, where the plasma treatment creates reactive groups that interact with the silane monomer in the adhesive to strengthen the bond. The closest prior art of record, Shukla (USPN 6,458,275) in view of Thurn (USPN 4,076,550), disclose a multiwell made from separate plates held together by adhesive, which either singularly or in combination fail to anticipate or render obvious the above limitations.
